

LITHUANIA

BIOMASS ACCESS

Surespan recently travelled to Lithuania to manufacture and supply a floor hatch to enable Finnish energy company Fortum to access their biomass pit at their new energy plant. The 5000 X 5000 mm hydraulically operated, double leaf hatch was designed to be easily operated by an electrically driven pump power pack.

Fortum wanted the simplest operation for a grab crane to gain easy access to the biomass plant so Surespan worked with engineering consultants AF Consult to come up with an effective solution.
